

Matthew Huelsenbeck

Marine Scientist

Matthew (Matt) Huelsenbeck is a marine scientist at Oceana, the largest international advocacy group working solely to protect the world's oceans. Since 2010, Huelsenbeck has supported Oceana's Climate and Energy campaign, where he studies the impacts of pollution on marine life and society as they relate to offshore drilling, climate change and ocean acidification.

Prior to working at Oceana, Huelsenbeck was a research associate at Scripps Institution of Oceanography, where he focused on the impacts of ocean acidification on fish larvae.

Huelsenbeck has an interdisciplinary background in marine science and policy, and is the author of two Oceana reports; *Ocean Acidification: The Untold Stories (2010)* and *Ocean-Based Food Security Threatened in a High CO₂ World (2012)*.

Huelsenbeck earned a Master's degree in Marine Biodiversity and Conservation from Scripps Institution of Oceanography at the University of California, San Diego. He has an undergraduate degree in Environmental Studies from Miami University, Ohio.
